

## **KX-TG9372B**

NEW! DECT 6.0 Drop & Splash Resistant Expandable Digital Cordless Phone with All-Digital Answering System, Call Block, Night Mode, Talking Caller ID / Talking Alarm Clock / Talking Battery Alert and 2 Handsets, Black

### **Style Meets Toughness**

Who hasn't tried to physically juggle so many items at once that one of them always gets dropped? And how many times has one of those items been your cordless phone? Don't worry, though, our Drop & Splash Resistant phones are tough enough to have passed the U.S. Army's Mechanical/Transit Drop Test, meaning that they qualified to survive in the field! Plus, they passed both the UL Standard- and Outdoor-use water-safety tests, too!

### **Long Range, Excellent Clarity and Greater Security**

DECT 6.0 (Digital Enhanced Cordless Telecommunications) technology lets you move freely around your home with long range and amazingly clear sound. It also assures greater protection against eavesdropping for all your calls. Operating in the 1.9GHz frequency range, your phone will not conflict with other wireless devices such as computer routers, wireless keyboards, microwave ovens and other common household devices.

### **Night Mode Lets You Choose Where the Phone Rings**

Now you can program each handset to ring — or not — at your discretion. Before going to sleep, simply set the bedside handset to Night Mode so that it won't ring in your bedroom. In the meantime, the handset in the den will still ring when that important call comes in without disturbing the person who's sleeping.

### **The Phone That Talks**

Now you don't have to be holding the phone to see who's calling. Using text-to-speech technology, the Caller ID<sup>1</sup> information is announced between rings. Panasonic's KX-TG9300 series DECT phones also boast a talking alarm clock that will tell you when it's time for lunch, and a talking battery alert that politely tells you when your battery is low with a "please charge phone" reminder.

### **Block Unwanted Calls**

Store the Caller ID info of any and all unwanted callers into your phone's Call Block list so that you can eliminate future pesky calls. After the information is stored, those unwanted callers will receive a busy signal when they call you again.

### **Put a Handset in Every Room**

With two handsets (one base and one charger) and the option of adding up to four additional handsets<sup>2</sup> — all while using only one base and one phone jack — go ahead and put one in the den, the kitchen, the master bedroom and the living room so you won't have to make a run for it when the phone rings.

1. Requires subscription to name-and-number Caller ID, call waiting and/or voice mail services offered by certain local telephone companies for a fee.

2. Additional handsets sold separately
