

The logo for the InfoWorld 2006 Technology of the Year Awards. It features the text "InfoWorld" in red and white, "2006" in white on a black background, "TECHNOLOGY" in large orange letters, and "OF THE YEAR AWARDS" in white on a black background, all set against a blue background with a circuit-like pattern.

HiPath 8000 Wins InfoWorld 2006 Technology of the Year Award

“Siemens HiPath 8000 Real-Time IP System: Full-featured, scalable phone system set the standard for SIP support in our test.”

Siemens HiPath® 8000 is a native SIP-based real-time IP system that provides very large enterprises with enterprise-class communications features, next generation presence-based collaboration and communications solutions, and the reliability of a carrier-class system. With the ability to place up to 100,000 users on a single system, the system is based on a hosted, Web-services communication architecture making it easy to deploy and manage communications from a single site.

Compared to the complexities associated with deploying first generation IP systems (1gIP) in very large enterprises, the HiPath 8000 system delivers a unified management and application domain and reduces the system, management, and application costs usually required to deploy enterprise communications. The data center oriented solution can be deployed in a self-hosted enterprise environment, as a managed service, or through a service provider.
